Patent No. 639063

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REFERENCE: GENSET. 054FR2

CURRENT APPLICATION UNMER: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

SOFTWARE: Patent.pm

SEQ ID NO 5389

LENGTH: 54

j Sequence 31868, Application US/0925291A

j Patent No. 6551795

general information:
    APPLICANT: Marc J. Rubenfield et al.
    APPLICANT: Marc J. Rubenfield et al.
    TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
    TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
    TILE REFERENCE: 107196.136
    CURRENT APPLICATION NUMBER: US/09/252,991A
    CURRENT APPLICATION NUMBER: US 60/074,788
    PRIOR PLING DATE: 1998-02-18
    PRIOR PLING DATE: 1998-02-18
    PRIOR PLING DATE: 1998-07-27
    NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 31868

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 101, Application US/10158847

Patent No. 6592865

GENERAL INFORMATION:
APPLICANT: TOW PARTY et al.
TITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity
FILE REPRENCE: PF557

CURRENT APPLICATION NUMBER: US/10/158,847

CURRENT FILING DATE: 2002-06-03

PRIOR ALLING DATE: 2001-06-04

PRIOR FILING DATE: 2001-06-04

NUMBER OF SEQ ID NOS: 158

Sequence 30379, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
THIS REPRESENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-07-27
PRIOR FILING DATE: 1998-07-27
PRIOR FILING DATE: 1998-07-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MAYLLE, C.T.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 103.

Sequence 103. Application US/10158825

Patent No. 6900033

GENERAL INFORMATION:
APPLICANT: TOM Parry et al.
TITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity
TITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity
FILE REPRENCE: PFP55
CURRENT APPLICATION NUMBER: US/10/158,825
CURRENT FILING DATE: 2001-06-03
PRIOR FILING DATE: 2001-06-04
NUMBER OF SEQ ID NOS: 158
SEQ ID NO 103

Sequence 10095, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
ATILIE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
Small and Intermediate Conductance,
Calcium-Activated Potassium Channels and Uses

Publication No. US20060048240A1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Sequence-Determined DNA Fragments and Corresponding Polypeptides
TITLE OF INVENTION: Therby
TITLE REPRENCE: 2750-15920
CURRENT APPLICATION NUMBER: US/11/096,568A
CURRENT FILING DATE: 2005-04-01
NUMBER OF SEQ ID NOS: 34471
SEQ ID NO 31101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Morfatiers, Pascal G.
